The owner, but this home achieves just that. I particularly love
night, looking up, he really does feel at home with nature.

plans for solar panels to be added to the roof in the future.

regulate the heating and cooling of the home. Also, there are
the mechanical units are connected to a geothermal system,
achieved with artificial lighting.

ceiling are highly insulated. It uses a tank-less water heater
will dim and brighten in an organic way that just can't be
during the day, or as clouds pass in front of the sun. The light
are carefully placed throughout to give natural light, and add
hallways and entry hall, and then open up to larger ceilings in
the living areas. Most importantly, each room has a connec-
tion to the outdoors. Windows are carefully place on each wall
when you line of site. As you walk down the hallway, or enter into
a room you immediately look towards the outdoors. Skylights are
carefully placed throughout to give natural light, and add
height to the space. Janson told me that natural lighting was
important in the design, because of the way the light changes
during the day, or as clouds pass in front of the sun. The light
will dim and brighten in an organic way that just can't be
achieved with artificial lighting.

The home is incredibly energy efficient. The walls and
roofing are highly insulated. It has a tankless water heater
and radiant heating throughout the concrete floor. Plus,
the mechanical units are connected to a geothermal system,
which uses the natural constant temperature of the earth to
provide heating and cooling to the home. The home also
plans for solar panels to be added to the roof in the future.

It's a rare thing when a design reflects the personality of
the owner, but this home achieves just that. It particularly does
the way Anantha can view the stars in the night sky through
the skylights in his bedroom. I imagine that lying there every
night, looking up, he really does feel at home with nature.
